Company Background

We are an independent multidisciplinary engineering practice providing structural, civil, environmental, geotechnical and highways & transport consultancy services from four UK offices and overseas.

Our projects cover a broad range of sectors; commercial, education, health, industrial, residential, regeneration, retail, defence, sport and leisure.

You will be based in our Bristol office where we have a team of 17 including a structural engineering team of 3, a civil engineering team of 5, geo-environmental scientist, a geotechnical team of 3, 2 transport planners, 3 Partners and our team secretary.

We run regular lunchtime CPD sessions from external product providers, internal staff presentations from all team members on a regular rota and online soft-skills training using Astute.

We have a very active social club with many team events throughout the year including Christmas Dinner and events such as bowling, go-karting, ice skating, stand up paddleboarding, pizza-making etc.

Student Placement Advert

2025-2026

Company Background

25 days annual leave. Potential for flexible home working, subject to agreement with line managers. Modernised, new office space in a unique building in Bristol with a games room, free gym and onsite cafe. Your active participation in Student and Graduate groups is actively encouraged with the rest of the office graduates.

Job Specification

Year long student placements with CampbellReith in our Bristol Office who can spend a full year in either the civil or structural engineering teams, subject to the student's aspirations and available workload.

Within the civil engineering team, students will learn and be involved in delivering flood risk assessments; drainage designs, including pipe sizes, gradients, routes, levels etc; highways design including vertical and horizontal arrangements using proprietary design software and undertaking vehicle tracking around car parks and residential developments.

Civil Engineering schemes that student placements have been involved with in the past include Holburne Park in Bath – a development of over 250 new homes in a classical style; Cuckoo Hill, Bruton – a development of 60 contemporary homes on a challenging site; New Magdalen Building, Oxford Science Park – a new development on an existing Science Park.

Within the structural engineering team, students will undertake various aspects of building structural engineering design and analysis including involvement in outline design, undertaking load take-downs and foundation designs, building 3D analysis models and running full analyses on the frames and liaising with structural technicians and helping to prepare drawings and BIM models.

Structural Engineering schemes that student placements have been involved with include the redevelopment of a 1970's retail centre to provide over 300 new homes in a new 12 storey tower plus refurbished and improved retail units; a three-storey office building on a science park; the extension and refurbishment of an historic, listed chapel building and a new out-of-town retail unit.

Skills Required

Experience with AutoCAD and Revit preferable.

Experience of design and analysis software such as Tedds or Masterseries preferable.

Degree Discipline

MEng/BEng (Hons) Civil Engineering or MEng (Hons) Civil and Architectural Engineering

Closing Date

06/12/2024
